
Development Infrastructure Program

The Development Infrastructure Grant Program (DIP) provides grants to municipalities and counties to finance public infrastructure projects that promote economic growth in the state.

Usage of DIP funds must be directly related to the construction, renovation or expansion of industry, and local governments must apply for DIP funding for new or expanded industry projects based on the public infrastructure needs of the project.

Industries that are eligible under this program include:

- Manufacturers and processors
- Distribution facilities
- Telecommunications and data processing enterprises
- Corporate headquarters and operations centers
- Research and development facilities

DIP funds may be used only to construct, renovate or expand publicly owned infrastructure. Examples of projects eligible for DIP funding include:

- Roads, bridges and rail spurs
- water and sewer systems
- drainage systems
- land improvements

Municipalities and counties interested in applying for DIP funding for new or expanded industry projects should contact MDA's Community Services Division at 601.359.3552. To learn more about the DIP program, [click here](#).
